History of Our Business

**Peter Bohlender Stayed at Home
While Gold Miners Rushed West
to California.**

In 1849, the same year in which gold was discovered in California, Peter Bohlender started working in a nursery near Dayton, Ohio. His natural love of trees and plants, his intimate knowledge of their proper planting and care, led him to the nursery business. So with the smallest of shoestring beginnings he launched his career as a nurseryman.

The buildings were small and the market was restricted to fruit trees and a few ornamental shrubs. Slowly, but surely, business improved and the nursery expanded. People around the locality of the nursery found that they could depend on Peter Bohlender's selection of plants. These people told their friends and the fame of the little nursery spread.

Today, in 1947, the small nursery has grown until we ship hundreds of thousands of plants from coast to coast each year.

We attribute our success and growth to our location in the heart of the fertile Miami River valley of Central Ohio, where we have superlative conditions for the production of the finest plants. Because of our buildings and modern methods of operations Spring Hill is TODAY able to offer better plants, better service and better values for your money.

DIRECTIONS FOR PLANTING FRUIT TREES—Trees should be planted immediately after opening package if possible. Keep roots covered with damp cloth. Do not expose to sun and air. (See cut opposite.) Dig hole large enough so that roots will not be crowded. Make separate pile of fertile top soil. Tree should be planted two inches deeper than grown in nursery. (Notice old soil mark around tree.) Put fertile top soil around roots, breaking up so that there are no air pockets. Fill hole about two-thirds full, pressing earth down firmly. Water well. Fill hole to top. First year a mulch of well-rotted manure or compost should be used to hold moisture and build fertility. Do not let fertilizer or manure come in contact with roots or body of tree.

Giant Blueberries

New giant U. S. Dept. of Agr. cultivated blueberries famous for size, flavor, profit, and beauty. The attractive plants are beautiful in flower and are handsome, dwarf, glossy foliated shrubs. The beautiful clusters of pink buds and white bell-shaped flowers are followed by the sapphire blue-berries in big clusters, often as large as grapes. Two or more varieties should be planted together for good yields. Blueberries require acid soil. If soil is sweet or alkaline, use peat moss or decomposed vegetable matter mixed with aluminum sulphate. The period of ripening covers several weeks. Plants last a lifetime and have no thorns. Easy to pick. Your choice of 16BB11 CABOT—early; 16BB12 RANOCAS—Mid-season; 16BB14 JERSEY—late.

The beautiful, graceful branches of the Vesper Iris are studded with from one to two hundred jewel-like flowers, truly a mammoth bouquet. The delicately colored blossoms, which at a little distance resemble somewhat a multitude of gorgeous butterflies at rest, with motionless outstretched wings, vary in color, including such hues as cool translucent lavender, with markings of mahogany, copper, lemon, orange, brown or tyrian. Well established clumps have produced from a few hundred to over 6,000 blooms in a single season. Mrs. T. W. Barnes, Oklahoma, reports 6,450 blooms from two Vesper Iris plants one year after planting—60 to 225 blooms per day from July 17 to August 29. The Vesper Iris blooms longer and produces more flowers than any other iris. It withstands prolonged dry spells in August and flourishes in almost any soil even sand. This remarkable iris will flower if planted before the first of July. 2 yr., 25c each; 3 for 59c.

Directions to Plant Shrubs

The diagram show the proper depth to plant shrubs. Dig a large hole so the roots will not be cramped. Put the good, finely pulverized top soil around the roots. Then water thoroughly and fill dry dirt at top of ground. A mulch of well rotted compost as manure, peat, etc., is excellent and helps the plants grow thrifty and produce more blooms.
